Academic Year: 2026 -2027

HandsMen Threads: Elevating the Art of Sophistication in Men's Fashion

Abstract

This project focuses on developing a customized Salesforce CRM solution for HandsMen Threads, a premium men's fashion and tailoring brand. The proposed system is designed to streamline and manage key business operations, including customer management, sales, order processing, inventory tracking, and marketing activities. A structured and scalable data model is implemented using five major custom objects: Customer, Order, Product, Inventory, and Marketing Campaign.

To improve efficiency and reduce manual work, important business processes such as order confirmations, loyalty program management, customer communication, and low-stock monitoring are automated using Salesforce Record-Triggered Flows, Scheduled Flows, Email Alerts, and Apex Classes. Validation rules are applied to maintain data accuracy and consistency, while role-based access controls ensure that sensitive information is available only to authorized users.

Additionally, a scheduled Apex batch process is implemented to monitor inventory levels and identify low-stock products, helping minimize stock-out and overselling risks. The system provides a centralized platform for managing business data and improving coordination between different departments. Overall, the Salesforce CRM solution enhances operational efficiency, customer satisfaction, data security, automation, and business scalability, providing HandsMen Threads with a reliable digital foundation for future growth.

Objectives

The main objective of this project is to **design and implement a Salesforce-based CRM system for HandsMen Threads** that simplifies business operations, improves customer relationships, and provides better control over sales and inventory activities. The project aims to:

- **Centralize** customer, order, product, inventory, and marketing information in a single CRM platform.
- **Automate** important business activities such as order confirmation, loyalty management, and inventory notifications.
- **Minimize manual errors** by applying validation rules and automated data processing.
- **Monitor stock levels efficiently** and identify low-stock products to avoid inventory shortages.
- **Strengthen data security** by providing appropriate access to Sales, Inventory, and Marketing teams.
- **Improve customer interaction** through timely emails, loyalty programs, and personalized communication.
- **Increase operational efficiency** by reducing repetitive tasks and improving coordination between departments.

PHASE 1 – REQUIREMENT ANALYSIS & PLANNING

Understanding Business Requirements

HandsMen Threads, a fashion organization, needs an efficient system to manage customers, products, orders, inventory, and loyalty information. Manual data management can lead to duplicate records, inaccurate stock levels, delayed order updates, and difficulty in tracking customer information, which can affect business operations and customer satisfaction.

The HandsMen Threads Management System provides a centralized Salesforce CRM solution to automate these operations. It maintains accurate business records, automates order confirmations, loyalty updates, and stock alerts, and ensures data consistency using Validation Rules, Flows, Formula Fields, Apex, and Scheduled Processes. The system also supports inventory and order management through automated updates, helping reduce manual effort and improve overall operational efficiency.

Defining Project Scope and Objectives

Project Scope

The scope of the project includes the development of a Salesforce CRM application for HandsMen Threads to manage customers, products, orders, inventory, and loyalty information. The application automates order confirmations, loyalty updates, stock alerts, and scheduled inventory updates. It also maintains accurate business records and reduces manual effort through Salesforce automation features.

Project Objectives

- Develop a centralized HandsMen Threads Management System using Salesforce CRM.
- Manage customer, product, order, inventory, and loyalty information efficiently.
- Automate order confirmations, loyalty updates, and low-stock notifications.
- Maintain data accuracy and consistency using validation rules and automation.
- Automate daily bulk order processing and inventory updates.
- Demonstrate Salesforce development using Flows, Apex, Formula Fields, and Scheduled Processes.

Design Data Model and Security Model

Data Model

The data model consists of custom objects and relationships designed according to the business requirements of HandsMen Threads. The application uses objects such as Customer, Product, Order, Inventory, and Loyalty Program to manage fashion business operations efficiently. Relationships between these objects help organize customer and order information, track inventory, support automation, and improve reporting.

Security Model

The data model consists of custom objects and relationships designed according to the business requirements of HandsMen Threads. The application uses objects such as Customer, Product, Order, Inventory, and Loyalty Program to manage fashion business operations

efficiently. Relationships between these objects help organize customer and order information, track inventory, support automation, and improve reporting.

PHASE 2 – SALESFORCE DEVELOPMENT (BACKEND & CONFIGURATIONS)

Setup Environment & DevOps Workflow

The HandsMen Threads project was developed using Salesforce Developer Edition in Lightning Experience. Salesforce tools such as Setup, Object Manager, App Manager, Flow Builder, Developer Console, and Lightning App Builder were used for development and configuration. Custom objects, fields, validation rules, automation, Apex components, and user interface customizations were created and tested within the Salesforce development environment.

The development process followed a structured workflow in which each feature was configured, tested, and verified in the Salesforce Developer Org before final implementation. This ensured that the system functions correctly and meets the business requirements of HandsMen Threads.

Customization of Objects

Custom objects were created to represent the key entities involved in the HandsMen Threads Management System. These objects are designed to store and manage business-specific information related to customers, products, orders, inventory, and loyalty programs while maintaining relationships between different records.

The custom objects developed for this project include Customer, Product, Order, Inventory, and Loyalty Program. These objects work together to manage customer details, product information, order processing, stock levels, and loyalty status. The relationships established among these objects improve data organization, record management, automation, and reporting within the application.

- Customer: Stores customer details such as name, contact information, and loyalty status.
- Product: Stores product details including product name, category, price, and stock quantity.
- Order: Maintains customer order details such as product, quantity, order date, and order status.
- Inventory: Tracks available product stock and supports low-stock monitoring.
- Loyalty Program: Maintains customer loyalty information and updates loyalty status based on purchase history.

Tabs

Think of Tabs as easy-to-find shortcuts. We created custom tabs for each of our custom objects (like a "Products" tab or an "Orders" tab) so our team can quickly view, create, and manage records directly within the "HandsMen Threads" app.

Lightning App

The HandsMen Threads Lightning App was developed in Salesforce Lightning Experience to provide a centralized interface for managing the organization's business operations. The app brings together important objects such as Customers, Products, Orders, Inventory, and Loyalty Programs in a single workspace.

The Lightning App provides easy navigation through custom tabs, navigation items, list views, and record pages, allowing users to access and manage business records efficiently. It also supports the project's automation processes, including order confirmations, loyalty updates, and low-stock notifications.

The app improves user experience, data accessibility, and operational efficiency by providing users with a structured interface for performing day-to-day business activities.

Custom Fields

Custom fields were created to capture the **business-specific information** required by the HandsMen Threads application. Appropriate field types were selected to ensure accurate data entry and support automation and reporting.

Some important fields include:

- **Loyalty Status:** A Picklist field used to classify customers as Bronze, Silver, or Gold based on their purchase history.

Validation Rules

Validation rules were implemented in the HandsMen Threads Salesforce application to ensure that users enter **valid and accurate information** before saving records. These rules enforce the defined business requirements, prevent incorrect values, and maintain **data integrity and consistency**.

The following validation rules were implemented:

- **Total Amount Validation (HandsMen Order):** Ensures that the order total amount is greater than zero and prevents invalid order amounts from being entered.
- **Stock Quantity Validation (Inventory):** Ensures that the inventory stock quantity is greater than zero, preventing invalid stock values.
- **Email Validation (HandsMen Customer):** Ensures that the customer email address follows the required Gmail format.

Formula Fields

Formula fields were created in the HandsMen Threads Salesforce application to **automatically calculate and display values** based on existing record data. This reduces manual calculations, improves data consistency, and provides users with useful information directly from the records.

Formula Fields Created

- **Customer Full Name:** Combines the customer's First Name and Last Name into a single value using FirstName & " " & LastName.
- **Order Total Amount:** Automatically calculates the total order amount based on the product price and ordered quantity.

A custom profile named Platform 1 was created to provide users with the required access for managing the main business operations of HandsMen Threads. The profile was configured with appropriate permissions for the Inventory, Sales, and Marketing functions of the application. The profile provides access to the relevant custom objects, including Inventory, HandsMen Order, HandsMen Product, HandsMen Customer, and Marketing Campaign, enabling authorized users to manage inventory records, process sales orders, maintain customer information, and manage marketing campaigns. The Platform 1 profile ensures controlled access to business records while supporting efficient inventory management, sales operations, and marketing activities within the Salesforce application.

[illegible]

User Configuration

Users were configured in the HandsMen Threads Salesforce application with appropriate roles and permissions based on their business responsibilities. The Salesforce Platform license and Platform 1 profile were assigned to provide access to the required application features.

- Niklaus Mikaelson: Assigned the Sales role to handle sales-related activities, including customer orders and product transactions.
- Kol Mikaelson: Assigned the Inventory role to manage inventory-related activities, including product stock and inventory records.

This configuration supports role-based access control and ensures that users can efficiently perform their assigned business operations.

The screenshot shows the Salesforce Setup interface for user management. The left sidebar contains navigation links: Setup, Home, Object Manager, Users, Analytics Groups, Permission Set Groups, Permission Sets, Profiles, Public Groups, Queues, Roles, User Management Settings, Feature Settings, Data.com, and Prospector. The main content area displays the 'Users' page for 'Niklaus Mikaelson'. It includes a 'User Detail' section with fields for Name, Alias, Email, Username, Nickname, Title, Company, Department, Division, Address, Time Zone, Locale, Language, Delegated Approver, Manager, Receive Approval Request Email, Federation ID, App Registration: One-Time Password Authenticator, and App Registration: Salesforce Authenticator. The right side shows the 'Role' (Sales), 'User License' (Salesforce), and 'Profile' (Platform 1) settings. Below these are various checkboxes for user permissions, such as 'Active', 'Marketing User', 'Offline User', 'Knowledge User', 'Flow User', 'Service Cloud User', 'Site.com Contributor User', 'Site.com Publisher User', 'WDC User', 'Mobile Push Registrations', 'Data.com User Type', 'Accessibility Mode (Classic Only)', 'Debug Mode', 'High-Contrast Palette on Charts', 'Load Lightning Pages While Scrolling', and 'Salesforce CRM Content User'.

Data Security Model

The data security model of the HandsMen Threads Salesforce application is designed to provide role-based access according to the responsibilities of each user. Appropriate permissions are assigned to ensure that users can access and modify only the records required for their business activities.

Role	Access Level
Sales	Full access to Customers and Orders
Inventory	Read and Edit access to Inventory and Products
Marketing Team	Read access to Customers and Edit access to Marketing Campaigns

Permission Sets can be used to provide additional access to specific users without changing their base profile permissions. This model helps maintain data security, controlled access, and data integrity across the HandsMen Threads application.

Email Templates

Email templates were created in Salesforce to standardize and automate communication with customers and internal teams. These templates are used by the HandsMen Threads application to provide timely notifications during important business processes.

The following email templates were created:

- **Order Confirmation Email:** Sent to customers after an order is successfully confirmed.
- **Loyalty Program Email:** Sent to customers when their loyalty status is updated based on their purchase history.
- **Low Stock Alert Email:** Sent to the warehouse or inventory team when the available product stock falls below the defined threshold.

Flows

Salesforce Flow Builder was used to automate key business processes in the HandsMen Threads application. The flows reduce manual effort, improve data accuracy, and ensure that required actions are performed automatically when specific conditions are met.

The following flows were implemented:

- Order Confirmation Flow: Automatically sends an order confirmation email when an order status changes to Confirmed.
- Loyalty Program Flow: Automatically updates the customer's Loyalty Status based on their total purchase value.
- Stock Alert Flow: Automatically sends a notification to the inventory team when the product Stock Quantity falls below five units.

These flows improve process automation, customer communication, and inventory management within the HandsMen Threads application.

Apex Triggers

Apex triggers were used to automate business logic that requires programmatic processing in the HandsMen Threads Salesforce application. The triggers help maintain accurate order, inventory, and customer loyalty information by automatically performing actions when records are created or updated.

The following Apex triggers were implemented:

Trigger Name	Object	Purpose
Update Order Total	HandsMen Order__c	Automatically updates the Total_Amount__c based on the order details when an order is saved.
Stock Deduction	HandsMen Order__c	Automatically reduces the related product stock when an order is confirmed.
Loyalty Status Update	HandsMen Customer__c	Automatically updates the customer's loyalty status based on their purchase history.

These triggers improve automation, data consistency, and accuracy while reducing the need for manual updates.

35  }
```

Batch Jobs

Batch Apex was used to process large volumes of records efficiently and automate recurring business operations in the HandsMen Threads Salesforce application. The batch jobs help maintain customer loyalty information and process inventory-related records without manual intervention.

Batch Job	Purpose	Schedule
Loyalty Points Calculation	Updates customer loyalty points based on their purchase information.	Every Sunday at 12 AM
Inventory Update	Processes and updates product inventory and stock quantities for accurate stock management.	Daily at 2 AM

These scheduled batch jobs support automated processing, accurate record updates, and efficient management of customer and inventory data.

```
global class InventoryBatchJob implements Database.Batchable<SObject>, Schedulable {

    global Database.QueryLocator start(Database.BatchableContext BC) {

        return Database.getQueryLocator(
            'SELECT Id, Product__c, Stock_Quantity__c, Warehouse__c ' +
            'FROM Inventory__c'
        );
    }

    global void execute(
        Database.BatchableContext BC,
        List<SObject> records
    ) {

        List<Inventory__c> inventoryToUpdate =
            new List<Inventory__c>();

        for (SObject record : records) {

            Inventory__c inventory =
                (Inventory__c) record;

            // Example inventory synchronization/restock logic
            if (inventory.Stock_Quantity__c < 10) {

                inventory.Stock_Quantity__c += 50;

                inventoryToUpdate.add(inventory);
            }
        }

        if (!inventoryToUpdate.isEmpty()) {
```

Conclusion

The HandsMen Threads Salesforce Management System successfully provides a centralized solution for managing customers, products, orders, inventory, loyalty programs, and marketing activities. The implementation of custom objects, fields, validation rules, formula fields, flows, Apex triggers, and scheduled batch jobs helps automate important business processes and maintain data accuracy. Automated order confirmations, loyalty updates, and stock alerts reduce manual effort and improve customer communication. Overall, the system enhances operational efficiency, data consistency, inventory management, and customer engagement while providing a structured platform for managing the business operations of HandsMen Threads.
